COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

FOREWORD TO
ANALYTICAL REPORT ON THE FINANCIAL
AND RELIEF CONDITION OF 87 COUNTIES OF
STATE OF MINNESOTA

J.P. Oct. 20, 1937 / HEC

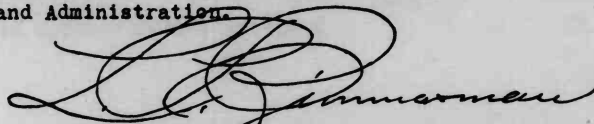

Shortly after the initiation of the E.R.A. Program in the spring of 1934, the matter of the ability of counties and local governments to contribute funds toward the Administration of relief was taken up, with a view of establishing a procedure for the determination of such amounts.

During the month of October 1934, steps were taken to undertake a comprehensive study relating to the financial and relief condition of each of the counties in the State. To make possible this study and survey, the Administration set up a project known as number S-F8-10, employing a special tax expert and financial analyst to direct and supervise the entire survey, with a staff of statisticians, engineers, and accountants, whose past experience concerning government, finance and taxation qualified them to conduct this work.

Although not all data obtained could be satisfactorily correlated and used for this survey, the efforts and cooperation by those who aided in furnishing the information was praiseworthy. This work was particularly difficult as the data, usually not compiled by the county officials until later in the year, were required for this survey in January.

It is, therefore, with a great deal of satisfaction that this original and comprehensive type of survey will now be available to Federal and State officials who are concerned with the problem of relief and with the financial condition affecting the 87 counties in the state.

We take this opportunity of expressing our thanks and appreciation for the very valuable aid contributed by the county auditors and other county officials, the State Auditor, the State Planning Board, the League of Minnesota Municipalities, the State Tax Commission, and the S.E.R.A. Departments of Statistics, Research and Administration.

Mr. L. P. Zimmerman,
Acting Administrator,
Minnesota Emergency Relief Administration,
St. Paul, Minnesota.

Dear Sir:

INTRODUCTION

Pursuant to your instructions, I have prepared the following analytical report on the financial and relief condition of the 87 counties of the State of Minnesota. In this report you will find graphs, charts, and financial data covering the various counties of the state as regards assessed valuation, tax levy, tax delinquency, indebtedness, and relief history.

OBJECT OF SURVEY

The object of this survey is to determine the existing favorable or unfavorable factors in each of the 87 counties as they may relate to their financial condition, to the progress they have made over a period of years, and to the relief history for the year 1934. This data will give the Federal, State and County officials who are concerned with the relief problem a full and complete picture of the existing condition in the respective counties and aid them in determining the extent of the ability or inability of a county to participate in its local relief load.

PROBLEMS OF SURVEY

At the outset a great many problems were encountered. Much of the information required was difficult to obtain from the various subdivisions of the local governments in the different counties. Wherever information was available, it was necessary to examine carefully the many conflicting figures which apparently resulted from a poor system of accounting and record keeping. Wherever possible, careful re-checks were made to ascertain the absolute accuracy of the figures given. All in all, the task of bring-

ing together the various data in each county dealing with a multitude of problems was in itself a big undertaking.

COUNTY ANALYSIS AND CLASSIFICATION

For the purpose of this analysis, a report sheet has been prepared for each county, containing important relevant data. These sheets constitute the main body of this report.

In the upper right hand corner of each county Financial and Relief Data pages, a fact picture is presented for comparative purposes. In most instances the figures shown are either a per capita or a percentage. This makes possible an easy comparison of the given facts with any of the other counties.

On the left hand side of the county pages is indicated the trends of the county during the period of 1926 to 1933. The trends shown are assessed valuation, total tax levy, net debt, and effective tax collections which reflect the existing delinquency condition. With the exception of effective tax collections, the indices were derived by dividing the figures for each year with the figures for the base year (1926), which is taken as 100%.

The effective tax collection indices were found by subtracting the actual tax delinquency of a given year from the accrued delinquency of the year following. This amount was then divided by the tax levy of the preceding year.

On the pages following is a brief analysis of each county in the state, giving the relief load which the county is carrying and showing pertinent trends in the four elements of taxation which determine the county's financial condition.

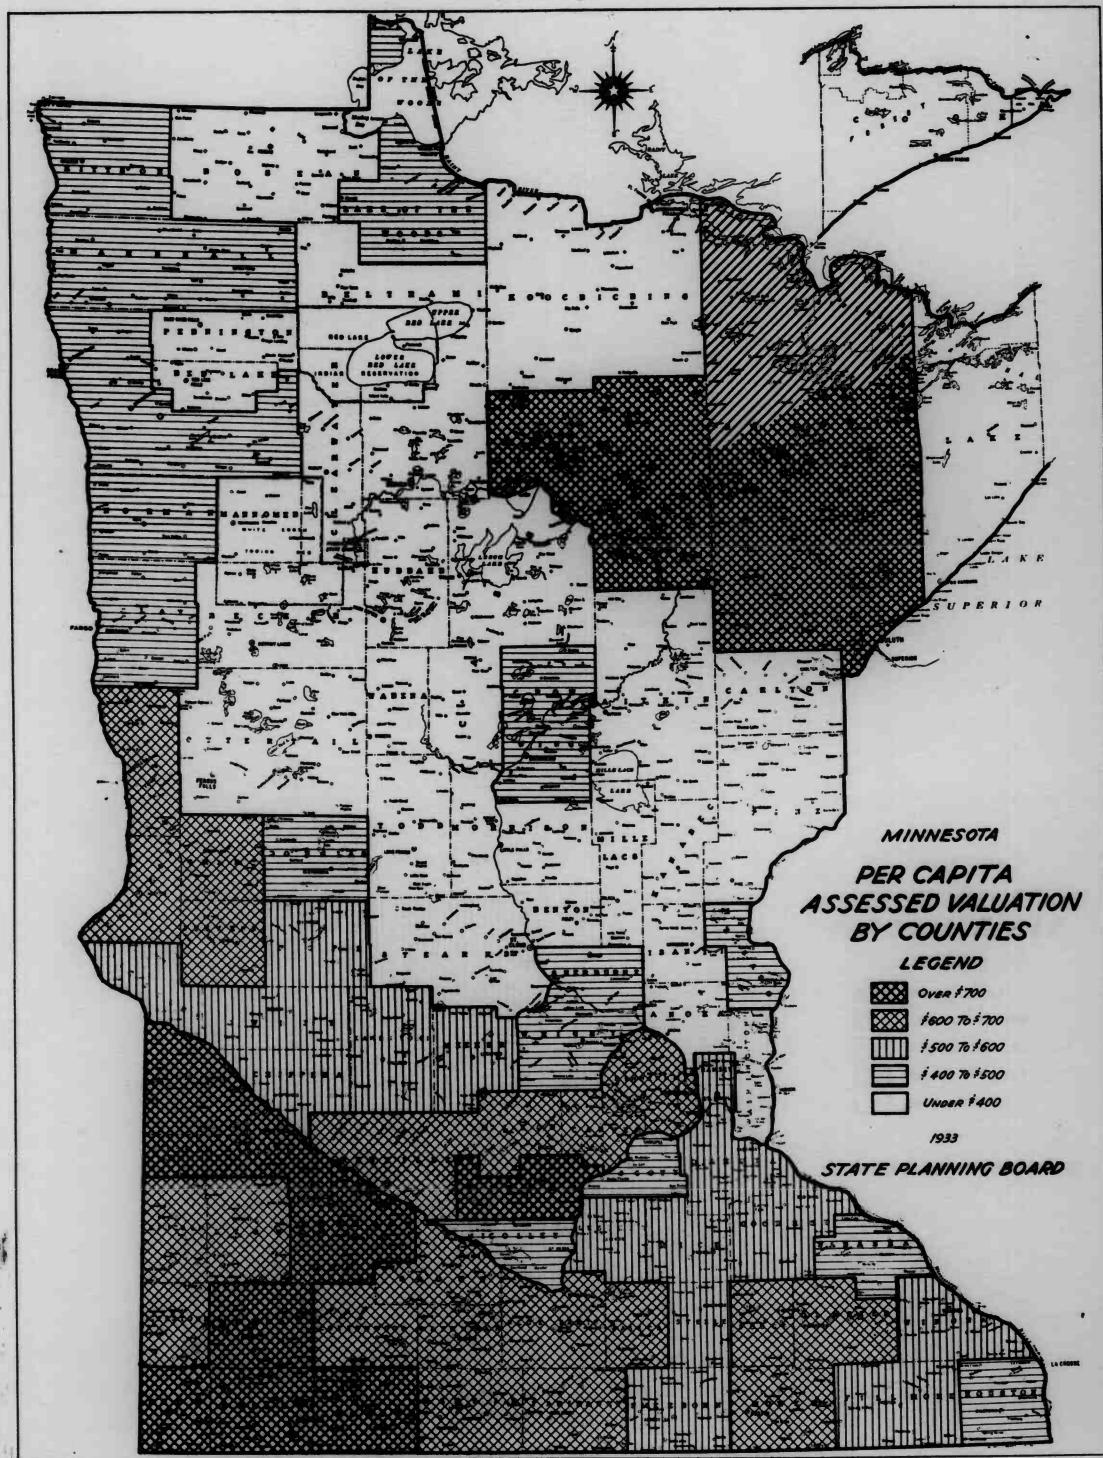

These factors combined give the picture of each county and show why it was given the particular classification which it bears for the purposes of this study.

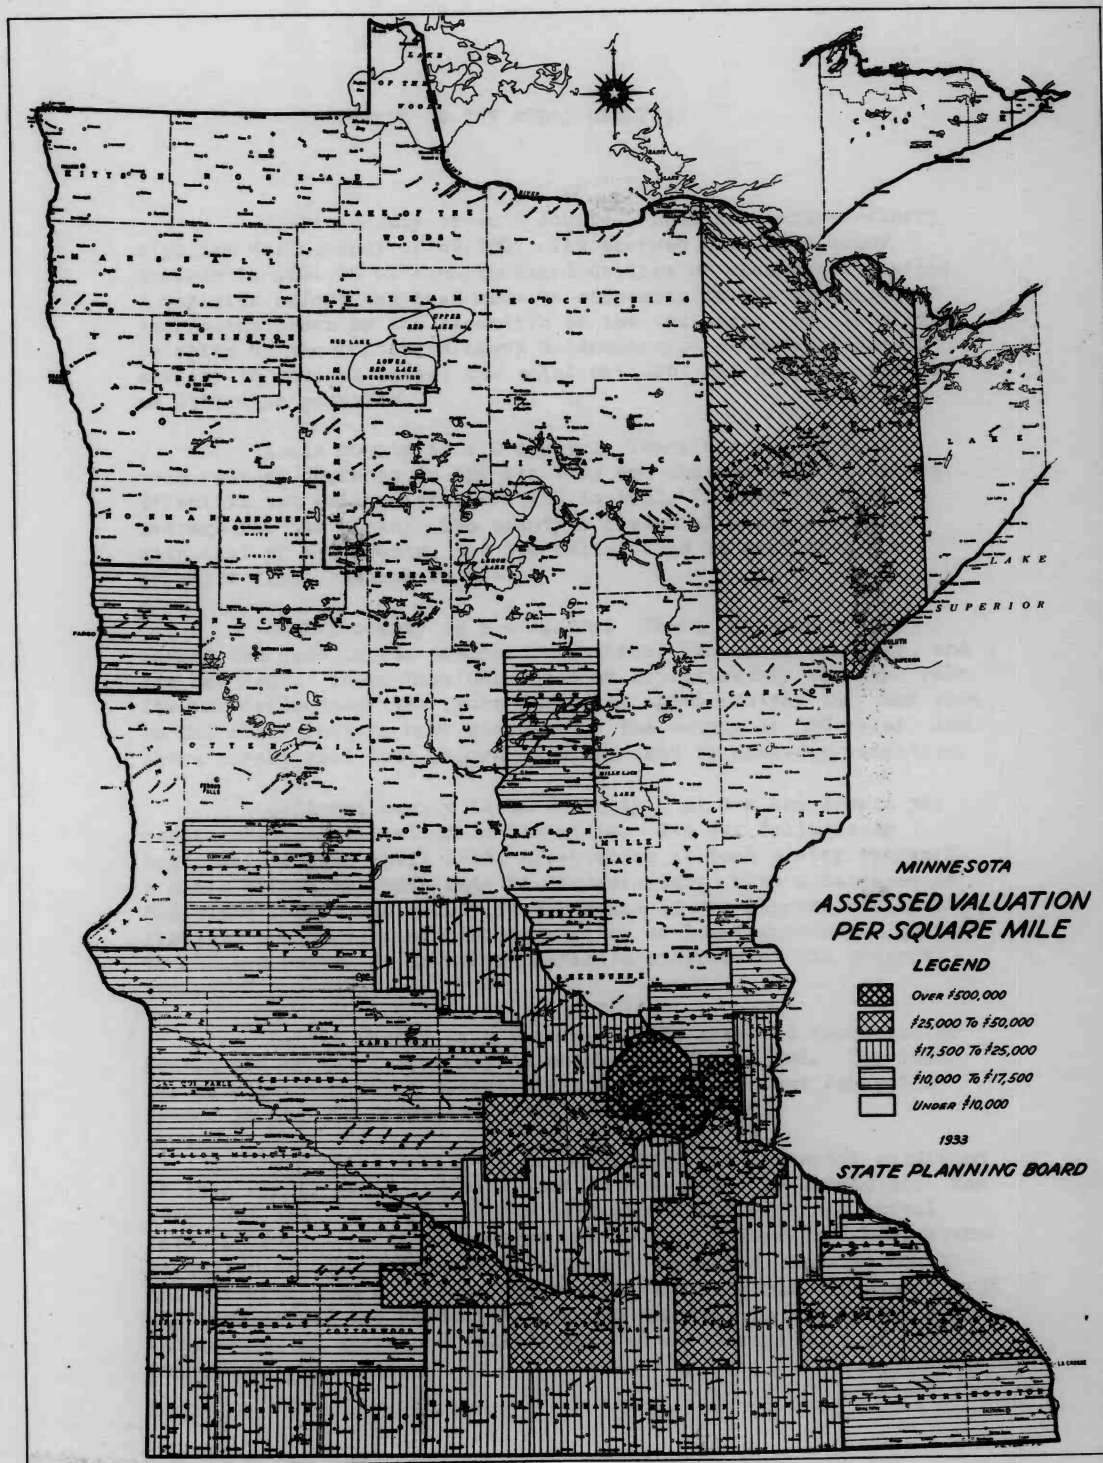

TRENDS IN THE THREE URBAN COUNTIES

St. Louis. The assessed valuation has dropped 16% since 1926, tax levy 9%, and net indebtedness 20%. The total average tax rate in the county is 5 mills more than the total average for the state. Tax collections amount to 82% of levies, which is slightly better than the average for the state. The per cent debt to assessed valuation is only 8.69, much less than either of the other two urban counties. The relief load in 1934 amounted to a monthly average of 7,393 cases with an average monthly cost of \$214,767.00.

Hennepin. Although the assessed valuation has been declining since 1931 it still is 102.5% of the 1926 valuation. The total tax levy shows an even greater increase, being 107.9% of the 1926 levy. The total tax rate exceeds the average for the state by 7.5 mills. There has been practically no change in the net debt since 1926. The effective tax collections are 80% of the total levy which is about average for the state. Since 1931 the accrued tax delinquency has increased rapidly although the amount delinquent to \$1,000 of assessed valuation is still only about 60% of the average for the state. The total relief cases for 1934 averaged 18,577 per month. The average monthly cost was \$567,273.00.

Ramsey. The assessed valuation has decreased 7% since 1926. Like Hennepin county the delinquent taxes show a marked increase since 1931. However, the amount of delinquent taxes to \$1,000.00 to assessed valuation is greater by \$4.50 than the average for the state. Effective tax collections, 80%, follow closely those of Hennepin county and the average for the state. The total tax levy has increased 9% since 1926. The net debt has increased 18.4%, which furnishes partial explanation for the 29.18% net debt to assessed valuation, which is by far the greatest of the three urban counties. The relief statistics for 1934 show on the average 13,681 cases per month at an average monthly cost of \$429,708.000.

TRENDS IN THE RURAL COUNTIES

Aitkin county is an E county. Reasons: extraordinary high tax delinquency of 69.98%. The accrued tax delinquency amounts to \$554.99 of each thousand dollars of assessed valuation. A definite effort has been made to economize in the operation of government shown by the reduction of the tax levy, 12% since 1926 in spite of the continued heavy delinquency. Because of the inability to collect taxes, the total net debt has not been reduced as otherwise possible.

Anoka county is a D county. There has been a fairly even rate of decrease in the tax levy and the assessed valuation. Effective tax collections were 73% in 1933, 7% less than the average for the state. The county's financial condition ranks with that of a C county, but its relief load is such that the county's final ranking is D.

Becker county is a C county. There has been a very normal decrease in its assessed valuation, its total tax levy, and its net debt. These have decreased at approximately the same rate. Its tax delinquency has grown upward at approximately the same rate as the other factors have decreased. The county is 83% rural, and shows a very good debt record of 8.87% debt to assessed valuation.

Beltrami county is an E county. It has the lowest per capita assessed valuation in the state. Its tax delinquency continued to grow until 1933, after which it took a step downward. A noble effort has been made to decrease debt, with a decrease of 60% since 1926. The county is E because of the unproductivity of its land and because of unwise practise of local government prior to 1931; however, it is making definite progress at the present time.

Benton county is a D county. The assessed valuation of Benton county has fallen approximately 22% since 1926. The 1933 tax levy has increased slightly since 1926. The most favorable factor is the 27% decrease of net debt since 1926.

Big Stone county is an E county. The financial condition of this county would indicate that it was normal in character. Tax levy, net debt, and delinquency have maintained a fairly normal rate of decrease; however, there has been an abrupt fall in assessed valuation of 35% since 1926. This fall indicates that the county has suffered from conditions other than the economic depression. It has been one of the hardest hit drouth counties in the state, which is shown by an average of 1226 cases, at an average cost of \$35,429.00 per month.

Blue Earth county is an A county, having 56% rural population. Its tax levy has been decreased 12% since 1926 despite the fact that assessed valuation has decreased 22%. Debt has been reduced approximately 25% and the county has only a 11.10% debt to assessed valuation.

Brown county is a B county. This county has 60% rural population, and a high per capita assessed valuation of \$681.30. Its average tax rate for the entire county is approximately 25 mills less than the average rate for the state. The high productivity of the land, the gradual decrease of the total tax levy, and the low percent of tax delinquency indicates its condition.

Carlton county is a C county. This county shows a normal decrease in assessed valuation and a similar rate of decrease in the total tax levy. Its tax delinquency is a little above normal because the county contains certain unproductive land. There has been a determined effort to reduce this condition. The reduction in net debt has been 52% since 1926.

Carver county is a B county. The per capita assessed valuation of this county is \$642.31. This county has 100% rural population, has no county indebtedness and pays all but 5.91% of its taxes. The other units of government in the county have reduced their debt 36% from 1926.

Cass county is an E county. Its low assessed valuation is due to the unproductivity of its land. Its chief asset is its lakes and trees. The county is poor despite its effort to economize. It has reduced its tax levy 22%, its debt 21%; but, in spite of these reductions the tax delinquency has continued to grow.

Chippewa county is a D county. Despite a high per capita assessed valuation of \$571.18, a continued reduction of the tax levy, a low accrued tax delinquency, and a 38% reduction in net indebtedness, this county falls into a D classification. Its condition is such because it has suffered materially from the drouth. There has been an average of 1512 relief cases, costing \$43,359.00 per month.

Chisago county is a C county. That this county should fall in the C group can be easily seen from the fact that there has been the same rate of decrease in assessed valuation, total tax levy, net indebtedness, and the same rate of increase in accrued tax delinquency. The county is within three mills of the average state tax rate of 68.48 mills.

Clay county is a C county. This county has an average total tax rate of 63.31 mills as compared with the average state tax rate of 68.48 mills. Its per capita assessed valuation is \$479.37. It has a 60% rural population. It has 9.71% debt to assessed valuation. There has been a normal rate of change in its financial condition.

Clearwater county is a D county. This county has a good deal of unproductive land which is shown by the low per capita assessed valuation of \$248.92. The assessed valuation has been reduced 35% since 1926. This is considerably more than the average for the state and shows an earnest effort to bring about a reasonable valuation of the land.

Cook county is an E county. It has 100% rural population. Its assessed valuation has been reduced 47% since 1926. It has reduced its tax levy and net debt and stopped the growth of tax delinquency. The county is in the E group because its natural resources are not such as to produce sufficient wealth for its meager population of 1.6 persons per square mile.

Cottonwood county is a C county. It shows a better than C condition from a strictly financial aspect. It has a high per capita assessed valuation of \$690.06. It has a tax delinquency of 10.77%, and has reduced its tax levy consistently since 1926. Despite these favorable conditions, it has suffered somewhat from drouth, and has fallen from its normal position.

Crow Wing county is an E county. Despite the fact that Crow Wing county contains the Cuyuna Iron Range, which brings up the property value of the county to \$429.20 per capita, the county is in a very unfortunate position. A good deal of the land not in iron ore is unproductive, and that which is in iron ore is not being worked thus creating a definite relief problem. The total average tax rate for the county is 92.23 mills as compared with 68.48 mills of the state.

Dakota county is a C county. There has been a normal reduction in the assessed valuation of the county. The total tax levy has fallen very slightly having only decreased 8% since 1926. There has been a reduction in debt, but this reduction has been approximately only 7%. These two factors tend to throw the county into the C classification. It might be added that the total average tax rate is 66.20 mills as compared with the state of 68.48 mills.

Dodge county is a B county. This county has a high per capita of assessed valuation of \$658.70, on which it has levied a very low amount of taxes. It has a low total net indebtedness. This B condition is also reflected by the small number of relief cases.

Douglas county is a D county. The general financial condition of this county is slightly better than average. It has a high rate of effective tax collection. It has reduced its net debt and tax levy at about the same rate. Its assessed valuation shows a normal reduction. However, it has been struck by drouth and shows an average of 1361 cases, at an average of \$19,824.00 per month.

Faribault county is an A county. The evidence that this is an A county is shown by its high per capita assessed valuation of \$677.14, its low delinquency of \$15.99 to every thousand dollars of assessed valuation and its 54% reduction of debt since 1926. This healthy condition is reflected by the fact that it has an average of 164 relief cases per month costing \$3,370.00.

Fillmore county is an A county. The condition of this county is indicated by the minimum tax delinquency of 8.91% of the total tax levy, and by a greater than normal decrease in the tax levy and the net debt. Of each thousand dollars of assessed valuation, this county has only \$9.45 of accrued delinquent taxes.

Freeborn county is a C county. This county falls into this group because it has been unable to reduce its total tax levy and net indebtedness as rapidly as those counties which have the same per capita wealth.

Goodhue county is an A county. The per capita assessed valuation is above average. Its total average mill rate is 10 mills below that of the state average. Since 1926 it has reduced its net debt 43%. The county unit of government has no indebtedness at all. The assessed valuation of the county has shown a gradual and normal reduction due to the general economic conditions.

Grant county is a D county. This county fringes on the edge of the drouth area and because of this has an average of 724 relief cases, costing \$11,100.00 per month. This fact has brought down the financial condition of the county from a C to a D. There has been an average reduction in the assessed valuation, and a fairly normal reduction in total tax levy, and a slightly higher than average growth in tax delinquency.

Houston county is an A county. This county has shown less than a normal reduction in its assessed valuation since 1926, and because of the fact that it has consistently levied a low rate of tax against this valuation has shown a low reduction of tax levy. It has only a 9.99% tax delinquency, and has a very low per capita indebtedness. The strong condition of this county is reflected by the fact that it has only an average of 108 relief cases costing \$1,983.00 per month.

Hubbard county is an E county. This county is located in the unproductive land area of Minnesota. It has a per capita assessed valuation of \$355.75. Its effective tax collections in 1933 were approximately 47%, which means that for every \$4.70 of actual cash it collected, it had to levy \$10.00. This high rate of delinquency points out that many of the persons are unable to pay their taxes, and this, combined with the fact that the county is 100% rural proves the unproductivity of the land. There is an

average of 466 relief cases, costing \$7,736.00 per month.

Isanti county is a D county. Certain factors throw this county into the D classification, namely, a low per capita assessed valuation of \$359.84, a slight reduction in the total tax levy rather than a large reduction, and a 31.76% delinquency. There is also an average of 734 cases, costing \$8,269.00 per month.

Itasca county is a D county. The most favorable factor in Itasca county is its definite reduction of debt since 1926. There has been a 59% reduction; however, there has been very little reduction in the total tax levy, and the assessed valuation has not decreased. There is a 93.83 mill total average tax rate as compared with the 68.48 mill total average tax rate of the state. Because of the fact that one of the principal industries of the county is iron mining; and because this industry is not operating, there is an average of 687 relief cases, costing \$13,602.00 per month. These factors throw the county into a D rating.

Jackson county is an A county. This county is in one of the most fertile sections of the state. It has a per capita assessed valuation of \$842.04. It has reduced its tax levy 34% since 1926. Its net debt has been reduced 49% and it has only \$2.86 of tax delinquency to every thousand dollars of assessed valuation.

Kanabec county is an E county. This county fringes on the edge of the unproductive area of the state. It has a per capita assessed valuation of \$299.94. Its net debt increased approximately 8% from 1932 to 1933. It has a tax delinquency of 36.76%, but has reduced its tax levy approximately 22% since 1926. Its financial condition and the fact that it has an aggravated relief condition has thrown the county into E classification.

Kandiyohi county is a D county. If this county did not fringe on the drouth area, it would be a little better than average condition. It has a fairly high per capita assessed valuation of \$546.00. It has reduced its tax levy and its net debt at about the same rate. It has \$24.41 tax delinquency to every thousand dollars of assessed valuation. This is slightly more than the normal county. Drouth conditions have, however, placed an average of 982 cases, costing \$29,848.00 per month, on relief.

Kittson county is a C county. Situated in the Red River Valley, this county's per capita wealth is about the average for the state. Considering the economic conditions, this county has reduced its taxes and its debt at a normal rate. The total average tax rate for the county is 64.84 mills as compared to the total average state rate of 68.48 mills. The most unfavorable feature

of the county is its 35.62% of tax delinquency.

Koochiching county is an E county. This county has the low per capita assessed valuation of \$295.00. Its tax delinquency is 55.12%. It has a little more than 50% debt to assessed valuation. These factors throw it into the E group.

Lac qui Parle county is a D county. This county is in the drouth relief section. Under ordinary circumstances its rating with the exception of debt would be above normal. However, drouth conditions have brought this county down to the D group.

Lake county is a C county. The fortunate location of this county in relation to the iron range, and the concentration of its population in its one large municipality have brought this county into the C group, despite the unproductivity of its land.

Lake of the Woods county is an E county. Because this county expected that the Federal Government would purchase certain of its lands and that the value of its lands would be increased by certain drainage projects, it over-valued them. There has been a definite effort to deflate this valuation. The tax delinquency is 78.46%, so only \$21.54 can be raised out of every hundred dollars of taxes levied. There has been an earnest effort to get this county on its feet, but the unproductivity of the land will mean its eventual return to the state.

Le Sueur county is an A county. This county is 100% rural population. It has \$577.51 per capita assessed valuation. It showed a 6.08% tax delinquency for 1933. The assessed valuation has followed a less than normal rate of decrease and there has been a reduction of approximately \$77,000.00 in total tax levy since 1926. Its relief burden is low. The monthly average is only 64 cases, costing \$1,763.00.

Lincoln county is an E county. This county was among those most severely hit by drouth. Under ordinary circumstances this county would fall into a higher grouping. It has a per capita assessed valuation of \$605.30. It has reduced its tax levy 31% since 1926, and its net indebtedness 35% since 1926. Drouth conditions can be shown by the fact that the average number of monthly relief cases is 1038 at a monthly cost of \$20,902.00.

Lyon county is a D county. Although this county suffered from the drouth, it did not suffer as severely as some of the other adjoining counties. Its per capita assessed valuation of \$640.14 is slightly above the median per capita assessed valuation. Although its debt has shown a reduction from 1926, it increased approximately \$67,000.00 from 1932 to 1933. There was a monthly average of 973 relief cases, costing \$21,630.00.

McLeod county is a B county. This county has a per capita assessed valuation of \$633.07. It has no county indebtedness, but the other sub-divisions of government have increased their net debt each year since 1932. The tax levy and the assessed valuation have shown the same rate of decrease. The county has a low rate of tax delinquency. These factors have thrown the county into the B classification.

Mahnomen county is a D county. This county is almost entirely an Indian Reservation. Its assessed valuation falls into the lower bracket with a per capita assessed valuation of \$324.70. It has a high rate of tax delinquency but arrested its growth in 1933 and collected nearly \$95,000.00 in back taxes. There has been a definite effort to reduce the net debt which has been decreased approximately 35% since 1926. Unproductive land and high delinquency have brought this county into this classification.

Marshall county is a C county. This county is generally an average county. This is shown by the fact that its per capita assessed valuation is \$412.46 and it has shown a fairly uniform rate of reduction in its tax levy and net debt. It has not, however, arrested completely the growth of tax delinquency. The tax delinquency of 1932 taxes as reported January 31, 1934 is 45.09%.

Martin county is an A county. This county is located in one of the most fertile sections of southern Minnesota and has a per capita assessed valuation of \$680.23. It has a comparatively low rate of tax delinquency. The county is 75% rural population. Net indebtedness has been reduced approximately 42% since 1926. The A financial condition of the county indicates that its relief load is low. The low relief load coupled with the financial condition has made the county an A county.

Meeker county is a D county. This county has a fairly high per capita assessed valuation of \$571.23. Its rate of tax delinquency is low. The rate of reduction of debt has been very slight as compared with the rate of reduction of the total tax levy. This coupled with the fact that the county bordered the drouth area has thrown it into the D group. Drouth conditions have caused an average monthly number of 988 relief cases, costing \$19,288.00.

Mille Lacs county is an E county. This county's natural wealth is low. Its per capita assessed valuation is \$286.65. It has reduced its tax levy and its net debt slowly. Its tax delinquency has accrued a little faster than average. The county has an average of 1405 relief cases, costing an average of \$27,185.00 per month.

Morrison county is a D county. The per capita assessed

valuation for this county is \$358.33, which is slightly below average. The total average tax rate is 66.43 mills as compared with 68.48 mills which is the total average state rate. There has been a continuous increase in accrued tax delinquency. Its financial condition is slightly under the C rating and the relief situation definitely brings the county into a D rating. There is a monthly average of 1748 relief cases, costing on the average of \$23,404.00.

Mower county is an A county. Five facts definitely bring this county into the A group: 1. Low tax delinquency, 2. Definite decrease in tax levy, 3. Definite decrease in net indebtedness, 4. A high per capita assessed valuation of \$625.88, and, 5. A low relief load history.

Murray county is a C county. There are three favorable factors in this county: 1. A high per capita assessed valuation of \$785.37, 2. A decrease in total tax levy of approximately 28% since 1926, and, 3. A high rate of effective tax collections. Although the debt has been reduced since 1926, it is still more than 10% of the assessed valuation. There is an average monthly relief case load of 329 cases, costing an average of \$8,212.00.

Nicollet county is an A county. That this county has diversified industries is shown by the fact that 53% of its population is rural. It has an average per capita assessed valuation of \$478.08. Its net debt is low as compared with its assessed valuation. There is a low rate of tax delinquency. This coupled with the fact that there are only 89 cases on the average a month with a cost of \$2,240.00, has thrown the county into the A classification.

Nobles county is a B county. Definite factors have thrown this county into the B classification: 1. A high per capita assessed valuation of \$785.76, 2. A fairly low rate of tax delinquency, 3. A definite reduction of tax levy since 1926, and, 4. A 30% reduction of indebtedness since 1926. The average number of relief cases is only 187, costing an average of \$4,500.00 monthly.

Norman county is a C county. Certain facts definitely indicate the classification of this county: 1. The per capita assessed valuation of \$427.87, which falls into the average grouping, 2. A little above average rate tax delinquency, 3. An average rate of decrease in total tax levy and net indebtedness, and, 4. A monthly average of 290 relief cases, costing on the average of \$6,408.00. This county has a 100% rural population.

Olmsted county is a D county. Although this county has above average per capita assessed valuation, the county has not reduced its total tax levy or its net indebtedness as fast as those counties in the higher classifications. It has a low rate of tax delinquency. Its 59% urban population is one of the

reasons for its high average monthly relief load of 843 cases, costing \$32,285.00.

Ottertail county is a C county. The per capita assessed valuation in this county is slightly under the state average. There has been a definite effort to reduce the total tax levy and net indebtedness. There have been fairly high effective tax collections. However, relief statistics show that for 1934 there was an average monthly number of relief cases of 2442, costing an average of \$31,110.00.

Pennington county is a C county. A glance at the county sheet will indicate that the county falls into the C grouping. Comparatively speaking, the county has shown a normal rate of decrease in tax levy, net indebtedness, and assessed valuation. Its effective tax collection has been slightly above average. The county is 59% rural.

Pine county is an E county. Tax delinquency has been high. Indebtedness has been reduced very slowly, but the total tax levy has been reduced 27% since 1926, despite the high rate of tax delinquency. It has a low per capita assessed valuation of \$311.77. The relief load is 1407 cases on the average per month, costing an average of \$14,031.00.

Pipestone county is a B county. It has a fairly high per capita assessed valuation of \$672.15. Its per cent of tax delinquency is low. The total tax levy has been only slightly reduced. The net indebtedness has been reduced approximately \$350,000.00 since 1926.

Polk county is a C county. Three facts are favorable to this county: 1. The per capita assessed valuation of \$443.63. 2. The effective tax collections have been about average. 3. Debt has been reduced \$500,000.00 since 1926 and is about 10% of the assessed valuation. The total tax levy has been reduced rather slowly.

Pope county is a D county. This county is in the drouth area. It has a fairly high per capita assessed valuation of \$576.66. There has been a reduction in total tax levy and net indebtedness since 1926. The percent of tax delinquency is about average. The relief statistics for 1934 show that the average monthly number of cases was 1407 and cost on the average of \$27,527.00.

Red Lake county is a C county. This is a small county which has 100% rural population. Its per capita assessed valuation is \$369.73. It shows a very high percentage of tax delinquency. However, both total tax levy and indebtedness have been reduced since 1926. The number of relief cases is 96 as an average per month and costing an average of \$1,415.00.

Redwood county is a C county. Its assessed valuation has fallen a little more rapidly than normal, but its total tax levy has fallen at about the same rate. It has a high amount of debt, but has been earnestly reducing it since 1926, a reduction of 44 %. Its tax delinquency is average.

Renville county is a D county. This county is in the drouth area. Its financial condition shows that it has a high per capita assessed valuation of \$669.53. It has a little more than 19% debt to assessed valuation. Its rate of tax delinquency is higher than average. There has been a definite reduction in total tax levy. Relief statistics show an average monthly number of cases of 965 at an average cost of \$22,737.00.

Rice county is a C county. The per capita assessed valuation is \$511.98 as compared with the average of \$527.60 for the state. Its percent debt to assessed valuation is less than 10%. It has a low rate of tax delinquency. A definite effort has been made to reduce the total tax levy, but this reduction has been less than 8% since 1926.

Rock county is a B county. Its total tax levy, assessed valuation, and net debt have been falling at the same rate. The most favorable factor is the total average tax rate which is 29 mills lower than the total average for the state. Relief cases average 112 at an average cost of \$2,673.00 per month.

Roseau county is a D county. This county falls into the D classification because of the following facts: 1. Low per capita assessed valuation of \$278.85, 2. A high percent of tax delinquency with effective tax collections only 46% of the total levy, and, 3. A 29.30% debt to assessed valuation.

Scott county is an A county. This county falls into this classification because of the following facts: 1. A low rate of tax delinquency, 2. A low total tax levy, 3. A 10.53% debt to assessed valuation, and, 4. An average of only 57 relief cases, costing \$1,246.00 per month.

Sherburne county is an E county. This county falls into this classification because: 1. A high number of relief cases. There is an average of 683 cases, costing an average of \$11,499.00 per month, 2. The per capita assessed valuation of the county is \$402.93, which is more than \$100.00 less than the state average, 3. The effective tax collections are only about 72%, and, 4. Total tax levy has dropped only 6% since 1926. In spite of this the total average rate is below the average for the state. It has a moderately low net debt to assessed valuation of 9.81%.

Sibley county is an A county. Certain facts that indicate that this is an A county are: 1. High per capita

assessed valuation of \$708.00, 2. A 58% decrease in net indebtedness since 1926. There is only 2.8% net debt to assessed valuation. The relief case history is good, there being on the average of only 67 cases per month, costing \$1,622.00.

Stearns county is an E county. The assessed valuation has fallen approximately 18% since 1926. The tax levy after increasing 18% in 1929 over 1926 has now been reduced to about 5% less than in 1926. This decrease has been almost at the same rate as that decrease in assessed valuation. The growth of tax delinquency has been continued. It has not accelerated as in some counties. Debt has been reduced at a rate common to most average counties. Its relief condition is the biggest contributing factor for this E classification. A monthly average of 3370 cases, costing \$76,821.00.

Steele county is an A county. This county has been able to spread its taxes and collect 94.55 cents on every dollar. The rate of decrease in assessed valuation has been very small as compared to other counties. The county has only an 8.50% debt to assessed valuation.

Stevens county is a D county. This county is in the drouth area. Under ordinary circumstances the financial condition of this county would be better than average. It has a per capita assessed valuation of \$615.14. Its percent of tax delinquency is less than the state average. It has only 7.03% debt to assessed valuation. Both net debt and total tax levy have been reduced since 1926. There is an average of 1084 cases, costing \$26,843.00 average per month.

Swift county is an E county. This county is in the heart of the drouth area. Its net debt is about 10% greater than it was in 1926. Its tax levy is about 8% lower than 1926, while its assessed valuation is 28% lower. Its effective tax collections are only about 71%. These facts coupled with the drouth condition definitely throw it into the E classification.

Todd county is an E county. This county has a low per capita assessed valuation of \$329.99. Its rate of tax delinquency is slightly above average. There has been a definite reduction in net debt and tax levy since 1926. The reduction in assessed valuation has been about normal. The drouth condition has thrown this county in the E classification.

Traverse county is a D county. This county fringes on the edge of the drouth area and is thrown in the D classification, despite the fact that it has a per capita assessed valuation of \$643.67, that it has a less than average rate of tax delinquency, and that it has materially reduced its total tax levy and net indebtedness.

Tabasha county is an A county. This county received this classification because: 1. There was an average of only 32 persons per month, costing \$1,005.00 per month on relief, 2. It has a low rate of tax delinquency, 3. Its net debt is 4% above 1926, and, 4. Its total tax levy has been reduced 18% since 1926.

Wadena county is a C county. This county has a low per capita assessed valuation of \$291.90. Its rate of tax delinquency is high, being 37.07% for the 1932 taxes as reported January 1, 1934. It has had a fairly uniform rate of decrease in indebtedness, assessed valuation and tax levy.

Waseca county is a B county. Debt has been reduced 42% since 1926. While tax levy has gone down only 7%, effective tax collections are about 87%. Assessed valuation has fallen 27% since 1926. These facts, together with the low relief load, place it into the B classification.

Washington county is a C county. A normal reduction of debt, assessed valuation, and tax levy, with a normal rate of increase in tax delinquency exemplifies this county as an average county.

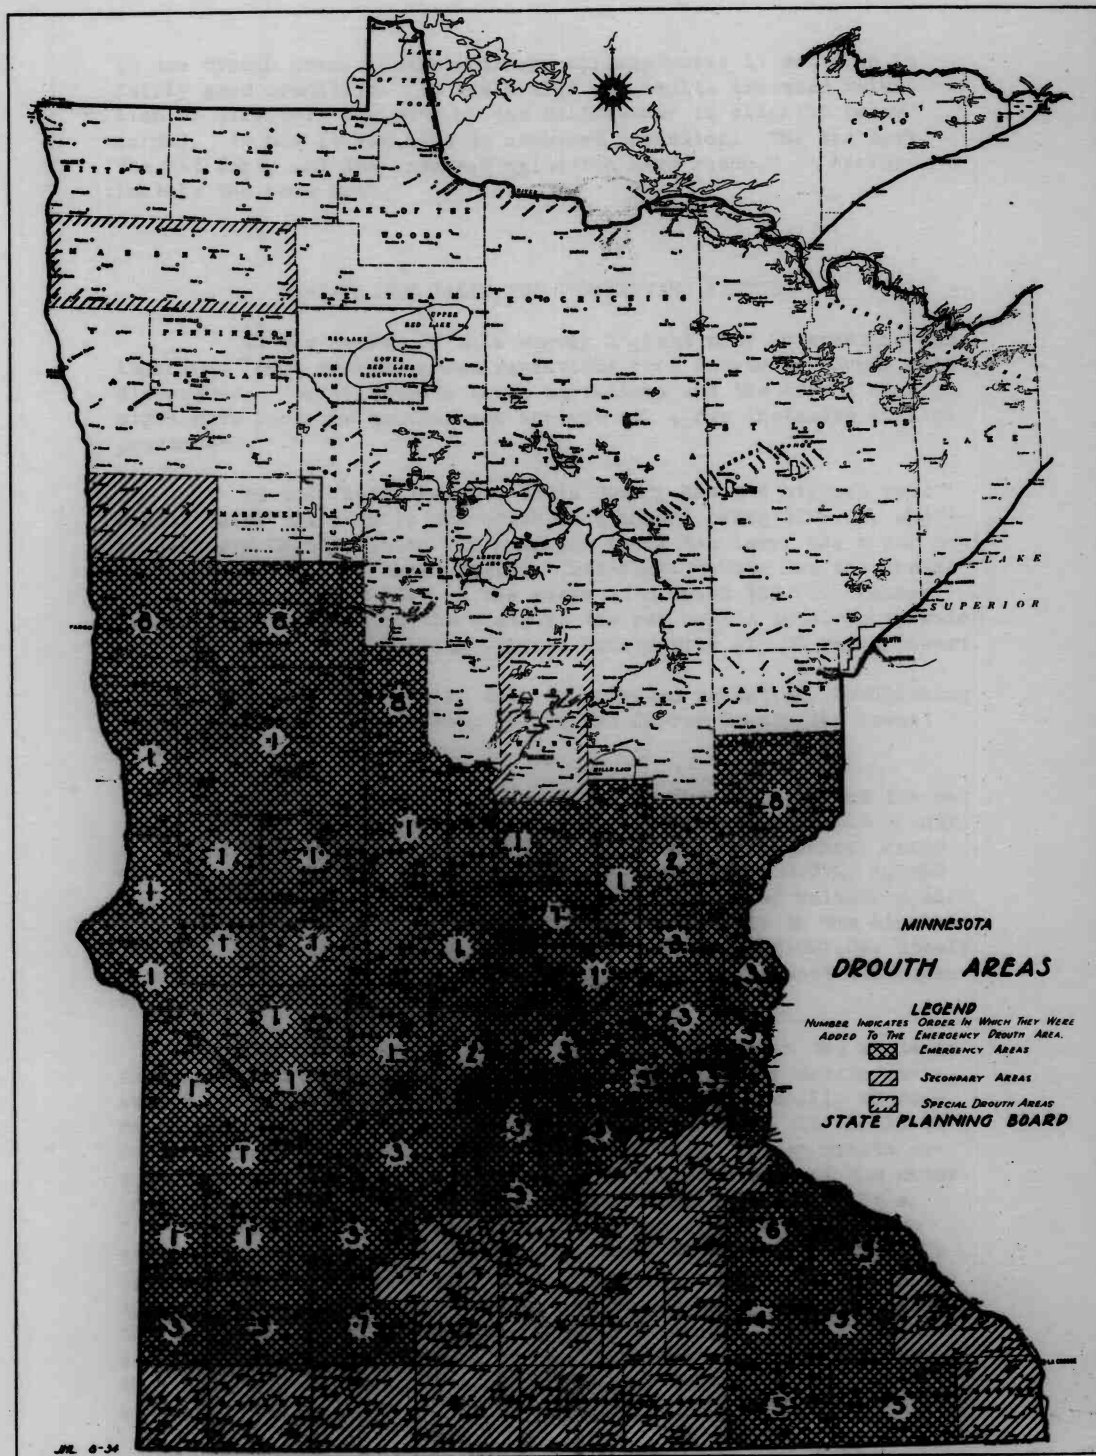

Watsonwan county is a B county. This is a B county because of the higher than average per capita assessed valuation. It has a very low rate of tax delinquency. It has only 8.57% debt to assessed valuation, and has materially reduced its total tax levy.

Wilkin county is a B county. This county has only 4.64% debt to assessed valuation. It has reduced its total tax levy 27% since 1926, and the assessed valuation has reduced at about the same rate. The effective tax collections in 1933 were only 76%, which, with its monthly relief load of 689 cases, deprives it of top ranking.

Winona county is a D county. This county is 60% urban. It has a per capita assessed valuation of \$502.32. Its rate of tax delinquency is low. It has only 4.88% debt to assessed valuation. There has been only a 6% decrease in total tax levy since 1926. The chief reason for its falling into the D classification is its urban condition.

Wright county is a D county. This county is in the fringe of the drouth area. In 1934 it had an average of 1300 cases, costing \$22,724.00 monthly, on relief. Its percent of tax delinquency is average. Its per capita assessed valuation is slightly under the average for the state. It has only 4.70% debt to assessed valuation.

Yellow Medicine county is a D county. This county is

in the drouth area. Under ordinary circumstances it would be in fairly good condition. It has a high per capita assessed valuation of \$716.56. Its rate of tax delinquency is slightly below normal. It has 11.98% debt to assessed valuation. The tax levy, the net debt, and the assessed valuation have reduced at approximately the same rate.

COMPARATIVE FACTS AND CONFLICTING FACTORS

In the course of this survey a great many interesting and important facts showing great variations from county to county were discovered. To illustrate these variations and the effect they might have upon the conclusions arrived at, a few instances will be presented:

It was found that St. Louis County has the highest per capita total tax levy in the state, the amount being \$108.00, whereas Hennepin County, which has a larger total tax levy, has a per capita total tax levy of about \$51.00. Ottertail County has the lowest total per capita tax levy in the state with about \$19.00. Ramsey County ranks highest in the state in the per capita total debt, which is close to \$173.00, whereas Goodhue County with \$15.00 ranks lowest.

In the per cent of debt to assessed valuation, Koochiching County ranks the highest with 53.17% and Carver County the lowest with 2.64%.

Another interesting fact found in the analysis was the percentage of the total tax delinquency in the state. Hennepin County, with a delinquency of 14.10% of the total state delinquency, ranks highest, whereas Steele County with a delinquency of 0.07%, is the lowest. The amount of delinquency per \$1000 assessed valuation alters the picture and brings Lake of the Woods County to the highest point of delinquency in the state, the amount being \$1091.04. Steele County, with 4.84 remains consistent in having the lowest delinquency for every \$1000.00 assessed valuation.

St. Louis County, which ranks the highest in the state in total per capita tax levy, remains the highest in per capita assessed valuation, the amount in this case being \$1,463.11, whereas Beltrami County with \$231.95 is the lowest. However, it should be noted that although St. Louis County ranks first in per capita assessed valuation, this is due largely to the existence of the mines in that county. These mines are, in most instances, owned by a few persons, and in many cases these few owners live outside the state, thereby minimizing the importance of the St. Louis County's high per capita assessed valuation. Hennepin County ranks 18th in the per capita assessed valuation, the amount being \$662.70. Although these comparative and conflicting factors do not in all instances show the real picture of the financial condition of a county, they nevertheless indicate certain definite factors in each given locality.

FINANCIAL AND RELIEF CONDITION OF COUNTIES

In order to ascertain easily the financial condition of each county, it was found necessary to analyze and weigh carefully - (1st) the existing financial condition of the county and all of its subdivisions; (2d) the progress each county has made during a period of years; (3d) the relief history and the facts as they existed from the beginning of the relief period to date. An analytical basis for weighing these factors was carefully worked out and each given special consideration. As a result a definite fact-finding basis was established for ascertaining the financial progress and relief position of the county. For the purpose of this report a state map is embodied herein which definitely pictures the financial relief classification of each county in the state with the exception of the three major counties, namely, St. Louis, Ramsey, and Hennepin. These counties are to be treated individually.

The 84 counties are classified in the following divisions:

A county with a classification "A" --

is in a position to carry the entire burden of the local relief load without help from the State or the Federal Government.

A county with a classification "B" --

is in a position to carry the major portion of the local relief load.

A county with a classification "C" --

is in a position to carry a substantial share of the local relief load.

A county with a classification "D" --

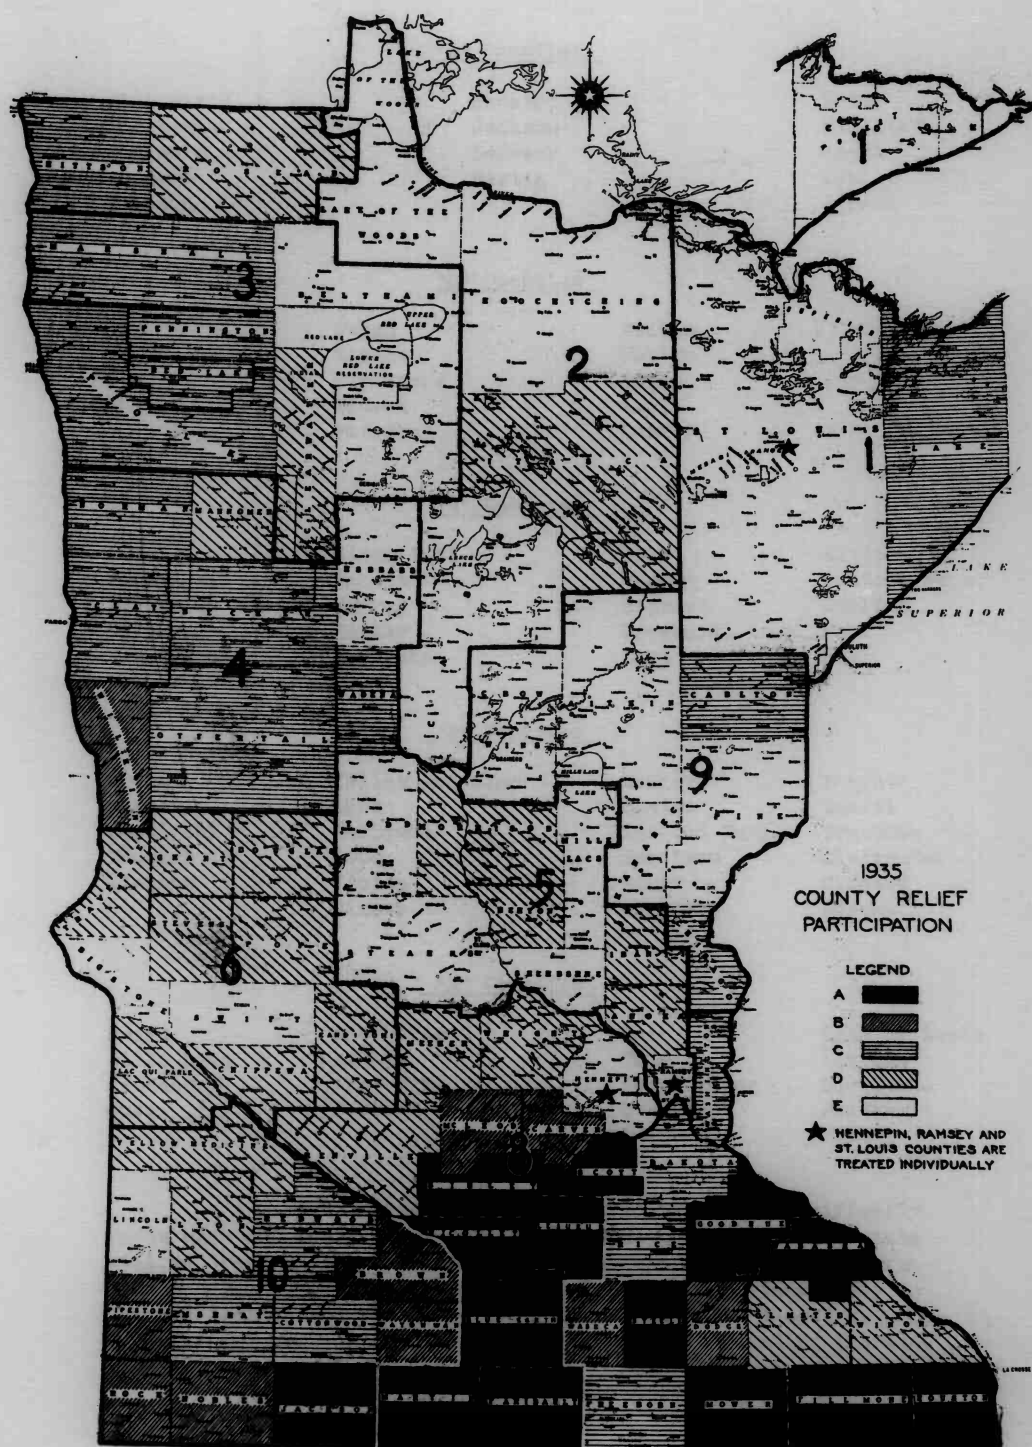

is in a position to carry but a small portion of the local relief load.

A county with a classification "E" --

has the minimum ability to provide for the local relief requirements.

CLASSIFICATION OF COUNTIES

As a result of the present analysis of financial and relief conditions within the counties, they have been classified in the A, B, C, D, E category as follows:

"A" Counties

Blue Earth
Faribault
Fillmore
Goodhue
Wabasha

Houston
Jackson
LeSueur
Martin

Mower
Nicollet
Scott
Sibley
Steele

"B" Counties

Brown
Waseca
Pipestone
McLeod
Watonwan

Wilkin
Nobles
Dodge
Rock
Carver

"C" Counties

Wadena
Pennington
Marshall
Chisago
Washington

Otter Tail
Dakota
Murray
Becker
Red Lake

Clay
Norman
Redwood
Freeborn
Lake

Kittson
Cottonwood
Carlton
Polk
Rice

"D" Counties

Anoka
Renville
Kandiyohi
Douglas
Stevens

Yellow Medicine
Lyon
Chippewa
Pope
Itasca
Winona

Meeker
Benton
Lac Qui Parle
Morrison
Grant
Mahnomon

Wright
Isanti
Traverse
Clearwater
Olmsted
Roseau

"E" Counties

Swift
Mille Lacs
Kanabec
Cass

Sherburne
Aitkin
Crow Wing
Hubbard

Cook
Todd
Koochiching
Stearns

Lake of Woods
Lincoln
Big Stone
Beltrami
Pine

A more detailed and analytical table which specifically rates each and every county of the 84 rural counties in the state will be transmitted separately from this report since the information therein is considered confidential and of importance only to those officials who are directly concerned with the budget requirements of the various counties and with the facts relating thereto.

MINNESOTA HUMAN RELIEF CASE LOAD

MINNESOTA HUMAN RELIEF CASE
LOAD, 1934
State, Urban and Rural

18b

Note: Case load refers to net number of families on direct and work relief plus net number of single resident persons on direct and work relief.

* Urban includes Hennepin, Ramsey, and St. Louis Counties; rural refers to balance of the State.

RELIEF COST AND CASE LOADS

A special table indicating the actual "Relief Cost per Case", the per capita cost, and the actual participation per capita in each county, is embodied in the pages following in this report. A graphic picture of the "Relief Cost per Case" is presented in a specially prepared chart which cannot be incorporated in this report because of size, but is being separately transmitted and made part of the survey.

It is unfortunate that the official records dealing with the number of relief cases in each county are such that they can not be relied upon from the point of view of accuracy. To illustrate: a county may have (a) direct relief cases, (b) work relief cases, and (c) drouth relief cases. In many instances such case records are conflicting because a great many officials count a case which participates in two or in all three of the stated relief categories as two or three separate cases when, as a matter of fact, the actual case load, if a person participates in all three types of relief, is actually one.

CASE RECORDS

An interesting fact is revealed in connection with this system of record-keeping; a certain county recently showed a larger number of cases in its county than its actual total population. Other counties show case loads as high as 70% or 80% of their total population whereas, as a matter of fact, if the number of actual cases were re-checked, it would be found that the case load is much less than the amount officially reported. This method of recording cases is misleading and puts the county in a bad light.

Furthermore, records dealing with drouth relief and human relief, consisting of direct and work relief, are not in all instances accurately and definitely classified. Hence, in certain counties the cost per case per capita for human relief will appear very high when, as a matter of fact, the proper allocation of the specific and actual types of relief would make the classification of actual relief cost much less. Although it is admitted that in the aggregate, total cost of relief in a county aggravated by drouth is nevertheless to be considered as relief cost per human case load.

Whether the various types of relief are classified or not does not in itself change the relief picture of the given county, but it would indicate how much each person actually receives from each of the three - or two - types of relief. This would indicate whether a county is actually paying out more or less per case for human relief than its neighboring county.

RECOMMENDATIONS

After carefully summarizing all of the facts relating to the financial and relief condition of the 84 rural counties and the three urban counties in the state, and after carefully analyzing the relief history and relief trends in each of the counties, and after careful examination of the actual expenditures for relief during the year 1934 by the state as a whole, the following recommendations are submitted to the Federal and State Relief Administrators:

1. That a budget anticipating the relief requirements for the year 1935 for the state as a whole be adopted. (See page 26).

2. That the budget set up for the rural and urban counties, which does not appear in this report, but which is being presented separately to the Relief Administrator, become the basis for anticipated relief requirements for 1935 in the 87 counties.

3. That at least 25 per cent of the total Federal contribution to the state for 1935, and 50 per cent of the amount to be contributed by the state during the same period, be set aside for emergencies such as drouth, hail, floods, etc. The figures as set up for this emergency type of relief will be found on page 26 .

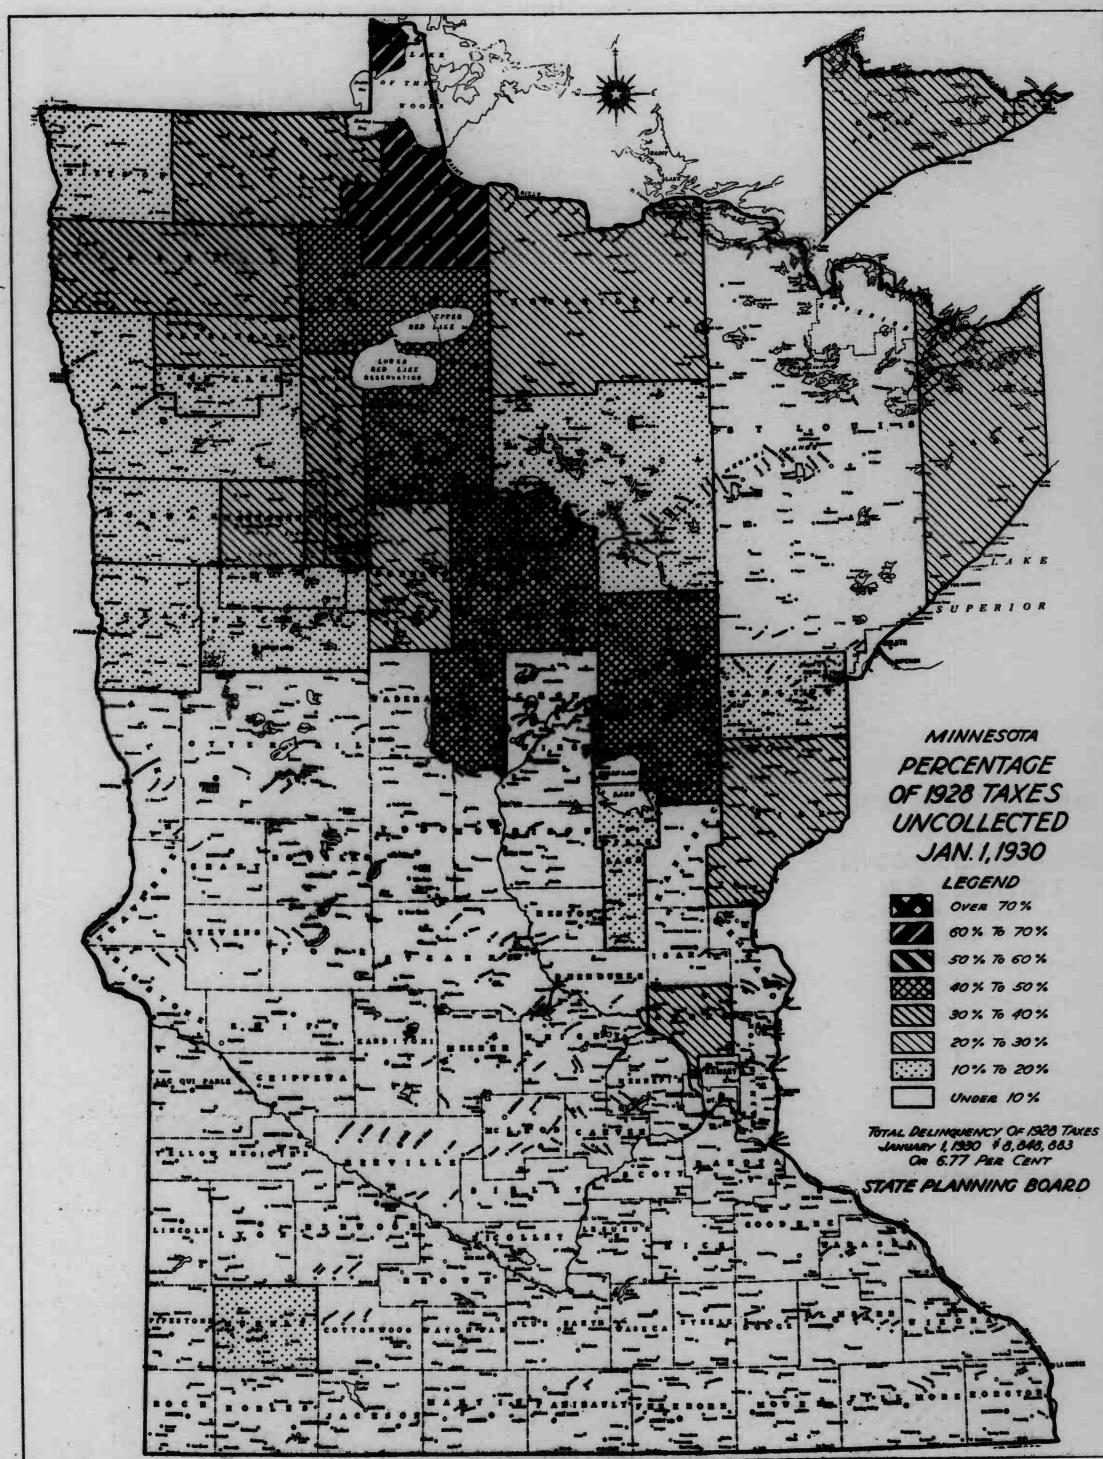

4. That a definite basis of county participation in the relief load, as outlined in a separate confidential table, known as Table Number 2, become the basic policy of the State Relief Administration for county participation.

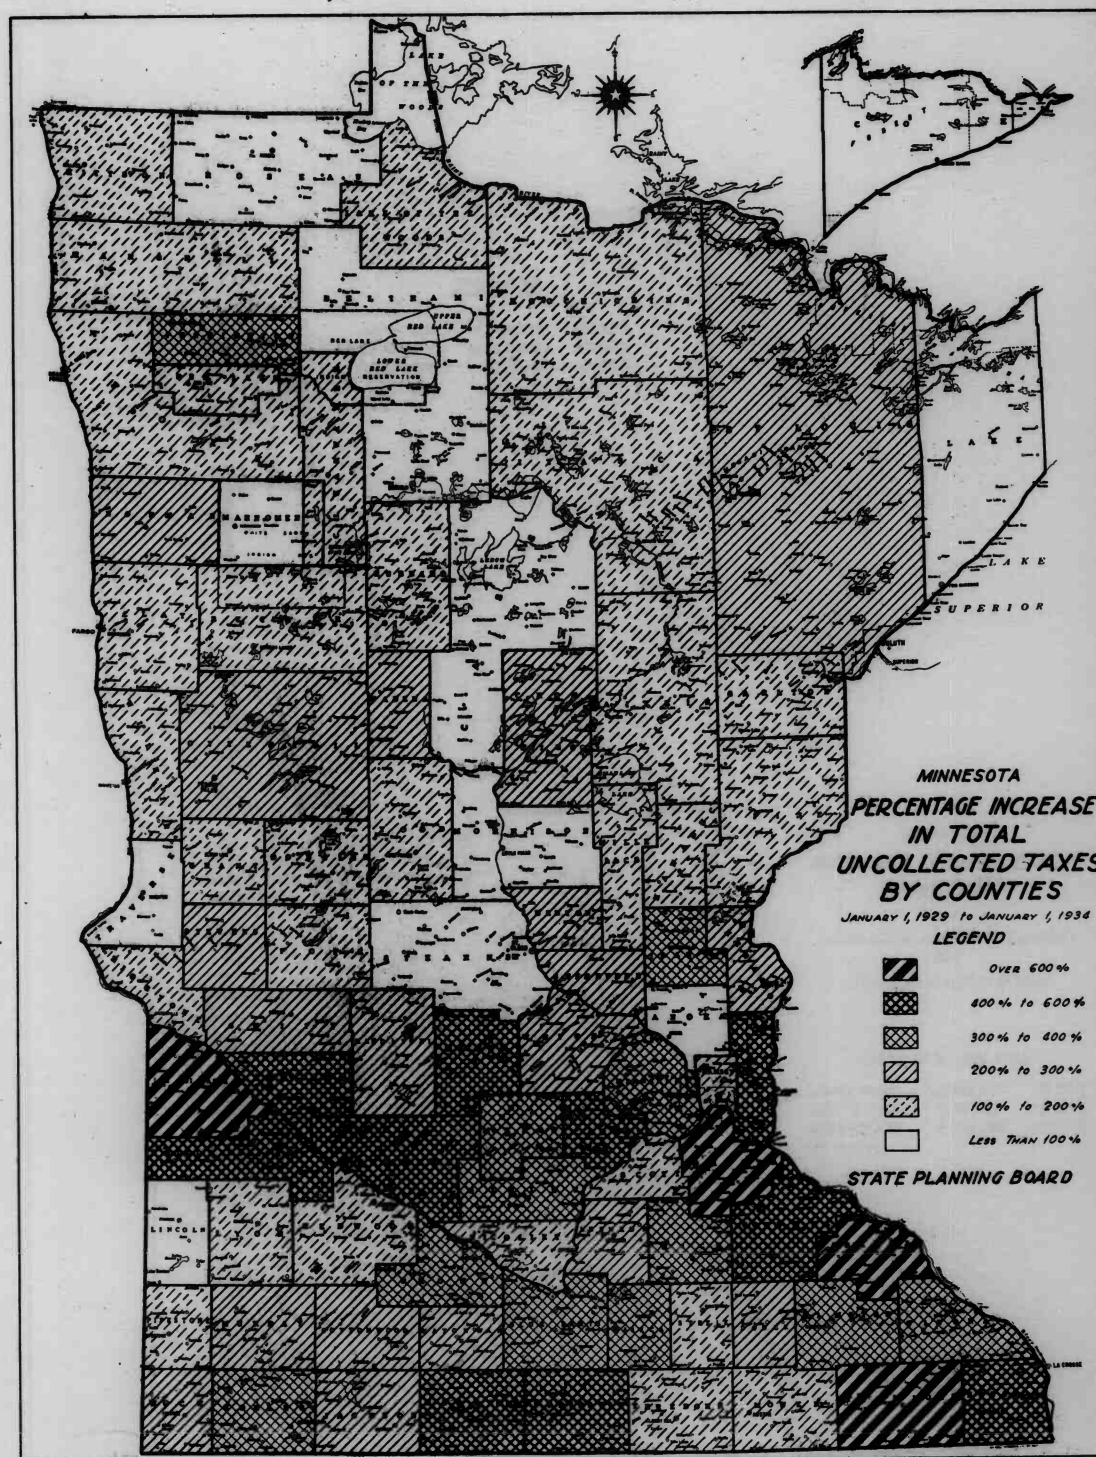

FORMULA AND TABLE ONE

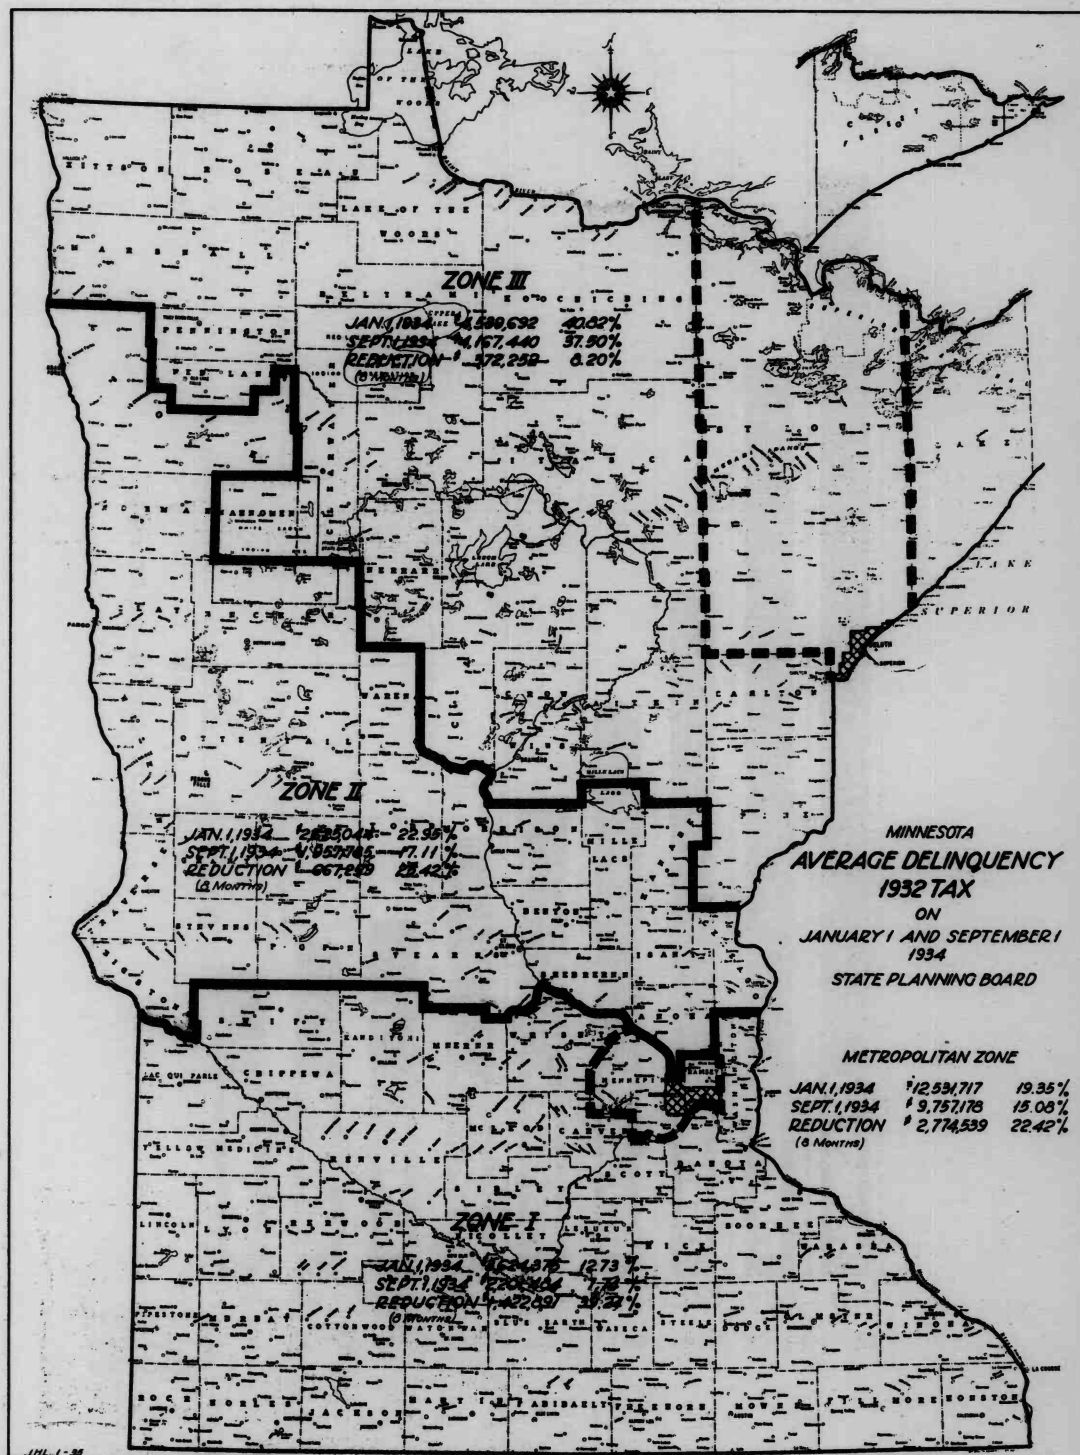

An analytical plan which was worked out for each and every county after carefully analyzing the financial, progress and relief condition of the county will be submitted separate and apart from this report to the Relief Administrator. (Formula Table No. 1 and 1. A.) Each county was rated in accordance with its ability to pay. All counties in the state, on the basis of that plan, are put on an equitable basis. No "A" county is asked to carry the load of the more unfortunate "E" county, hence the basis of actual local participation is fair, reasonable and just to each county. It might be well to state at this point that a complete interpretation of the formula recommended and the basis arrived at has been written up separately and is not being embodied in this report. This is being transmitted in a separate memorandum to the Administrator. (Formula explanation Number 1.A.)

THREE URBAN COUNTIES

5. That the three major urban counties in the state, namely, Hennepin, Ramsey and St. Louis counties, be treated individually and not in accordance with the plan and formula recommended

HISTORY OF TAX DELINQUENCY IN MINNESOTA

for the 84 rural counties. This becomes necessary for the following reasons:

- a. The cost of relief per case in the urban counties is larger than the cost of relief per case in the rural counties.
- b. A concentration of wealth and population is found to exist in the above named three counties.
- c. The estimated requirement for relief for 1935 for the three urban counties is approximately 48.77% of the total budget for the State of Minnesota, whereas the population of these counties is approximately 39.4% of the total state population.
- d. Because of the peculiar conditions existing within these three counties, it will become necessary to treat each county individually. However, the basis of approach in dealing with the urban counties, their required local participation, and their individual total budget for 1935, will be discussed in a special memorandum transmitted to the Administrator. (Memorandum Number 1.)

TAX DELINQUENCY

5. That one of the major problems now confronting each and every county in the state, and the State of Minnesota as a whole, is the problem of the growing tax delinquency. The problem of delinquency has become one of great concern to officials and to the taxpayers who are still paying their taxes. Local government found it necessary in many counties and their subdivisions to increase the tax rate by 200% to 300%, because of the decrease in tax collections.

The relief problem within the last few years has made it impossible for many counties to carry on their governmental activities as they have heretofore as a result of the growing relief burden. However, tax delinquency has been considered by all government officials as a liability. In view of the situation as it now exists, the point of view of the public officials is probably correct, but it should be clear that tax delinquency is in itself not altogether a liability. It must be compared with a mercantile establishment that has on its books a large amount of accounts receivable for services already rendered, or goods already sold. So for the time, the merchant's assets are frozen. If the merchant is to carry himself through the period of depressed business conditions,

he will somehow have to obtain credit, offering his accounts receivable as security. The same principle must, in this period of depression, apply to governmental units since it is conceded that a government cannot go out of existence, but must remain as a going concern, and since the power of government is greater than the power of the individual to finance itself, government must find a new method of financing its receivables (frozen assets) to meet the existing emergency.

UTILIZING TAX DELINQUENCY

For these reasons a special basis for utilizing tax delinquency to finance local relief requirements on the basis of county participation will be treated in a special analytical memorandum on a basis of a practical approach on the subject. It is believed that this plan will put all counties on a fair and equitable basis and preclude the pauperizing of many of the counties in the state. Legal research along these lines is now under way, and when completed, will be presented to the Administrator, and will cover the entire subject of tax delinquency as it may be used in financing relief without necessarily increasing the tax rates in any of the counties of the state.

THE PUBLIC WORKS PROGRAM

7. That the new Federal policy as regards the Public Works program, which is now under consideration by the Congress of the United States, as recommended by the President, when adopted and put into effect, will alter the entire existing relief picture. However, during the period of transition, and the period required for engineering and preparing plans for a Public Works program, the relief condition in Minnesota will necessarily remain the same. It is estimated that the Government program, at best, will not become operative until October 1935, and even at that date, the number of people that may be put to work to start the Public Works program will be comparatively small. Hence, it would be well to bear in mind that very little of the existing relief condition in Minnesota will be changed during the year 1935.

a. It is, however, recommended to the Relief Administrator that a plan be set into motion whereby it will be possible to anticipate at least two months in advance any Public Works program in any of the given counties of the state.

b. It is further recommended that the smaller Public Works projects be set up first. This will aid many of the small communities of the state to benefit immediately from the Works program, since it is expected that the larger projects will require more time for completion of plans and solution of the particular engineering problems in connection therewith.

c. It is also recommended that the Works Division be put to work at once to prepare and line up all projects on which the details of the engineering plans have been agreed upon, and be ready to put these projects in line for approval at the very earliest possible date.

COOPERATION PARAMOUNT

8. That the various county governments cooperate with the state and federal officials in every way possible, both in meeting the existing relief problems and in preparing for approval and adoption the various Work projects needed for the respective counties and their subdivisions. This type of cooperation will put into motion all governmental machinery in a short period of time and will benefit greatly the governmental units affected.

THE OUTLOOK FOR LOCAL GOVERNMENT

9. That the present outlook, unless conditions are substantially improved, is not the brightest for a great many counties in the state. From this survey it was revealed that many counties have now arrived at the point of insolvency, and many more counties will reach this point ultimately unless special steps are taken at once to meet certain of their local aggravated conditions. Unless the relief conditions are improved within the next two or three years, most of the units of local governments will become insolvent. A great many government units in Minnesota have already reached a point in their effective tax collection, and because of the continued high cost of government, where bankruptcy is the inevitable result unless immediate and energetic steps are taken:

- a. To rearrange their rural population, by removing certain marginal land from cultivation,
- b. To re-set the basis of valuation of their productive land,
- c. To remove the unproductive and scattered lands from their tax valuation rolls altogether,
- d. To reorganize their local units of government based on present day needs and to abolish many unnecessary offices,
- e. To rearrange the county boundaries and reduce the number of counties in the state,
- f. To consolidate the many needless school districts and abolish at least 4000 such districts now found to be superfluous,

- g. To establish an improved and modern system of assessing property supervised by a trained and experienced County Assessor operating under the jurisdiction of the State Tax Commission.
- h. To revalue the used and useful property and establish a budget based on the actual and existing values, and not on imaginary values which do not exist except on the books of some of the county officials.

MODERN SYSTEM OF CASE RECORDS URGED

10. That an up-to-date system of records for ascertaining more accurately the actual drouth cases, work relief cases, and direct relief cases be installed and at once put into effect. This will enable the administration to have a more accurate and uniform system of relief costs, relief distribution, and cost for administration of relief itself. It has been found that the cost for administration resulting from the present system is too great in many counties and should not be allowed to continue much longer. In fact, in many counties, where the case load is low, the cost for relief administration is relatively very high, hence the grouping of several neighboring counties for administration of relief will greatly reduce the cost of disbursing relief and increase the efficiency of relief distribution.

COST STUDY RECOMMENDED

11. That a special study be made, analyzing the differential in cost of the per case load in many of the counties as it affects direct relief, work relief and drouth relief, wherever such costs appear to be much out of line.

Reference is hereby made to the chart and table entitled "Relief Cost Per Case", which indicates graphically and numerically the relief situation as regards (a) cost per case, (b) cost per capita, and (c) the actual participation per capita in the given counties.

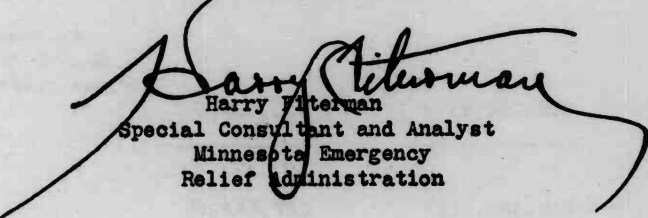

CONCLUSIONS

It may be stated definitely that the relief picture for the next six months in Minnesota will remain unchanged even after the present recommendation for a Public Works program is adopted by the Congress of the United States. In contemplating the need for the year 1935, the basis of determining the 1935 budget for the state as

a whole was taken from the relief expenditures as averaged during the last six months in 1934, because the relief and case load was not evidenced fully during the first few months of 1934 due to the CWA program and the period of transition thereafter. The relief picture in Minnesota was further aggravated by the spreading drouth condition in the various parts of the state. The actual picture of relief costs and relief distribution became evident beginning with June and July 1934. The relief figures taken for the last six months of 1934, therefore, reflect the real condition in the counties and state. At best, certain of the drouth counties in 1934 will necessarily continue to participate in drouth relief to a large extent; even if their crop condition improves next summer, their participation would remain high until August 1935. The counties situated in the poorly cultivated areas will find themselves in a more aggravated condition this year than the year just past due to their accrued tax delinquency and the costly units of government.

All in all, the picture of relief in Minnesota must be visualized from a broad point of view. Nothing can be taken for granted. Contact with the various counties and their local subdivisions must be continued and carefully watched. It becomes the responsibility of the Relief Administration, both Federal and State, to put relief on a highly efficient basis by eradicating and removing the undesirable elements and those least entitled to relief participation. It is likewise the duty of the relief officials to build up the administrative end of relief to a high point of efficiency. Disbursing of relief and relief administration should be placed on a high standard. No one should be permitted to capitalize on the misery of our poor and unfortunate citizens. It becomes the duty of the public minded officials, Federal, State and County, to cooperate to the best of their ability to that end.

Respectfully submitted,

Harry Vitterman

STATE WIDE TRENDS

There are certain very definite trends in the tax situation of the state. The assessed valuation has steadily decreased since 1926. The decrease from 1929 up to 1934 was 17%. The total net debt of the taxing units within the state has also decreased 17% over the same period.

The latest figures available indicate that the increase in tax delinquency in the state is much less since 1933, when effective tax collections were 80% of the total 1932 levy. Total tax levies in most units of government have been reduced since 1929. The total decrease in the state from 1929 to 1934 is about 13%. However, some of the units of government have found it necessary to levy more taxes in 1933, collectible in 1934, than ever in the past. There are certain obvious reasons for these units doing this: 1. The rate of tax delinquency has continued to grow, thus causing the unit to levy more taxes to raise the same amount of cash money, and, 2. The cost of government in the various units has been decreased, but the cost of participating in the various relief and works program has caused the country to increase its tax levy.

One cannot anticipate the trend in assessed valuation of the state in the future, because certain artificial factors have been or are being introduced to decrease the valuation. The Homestead Act passed by the 1933 legislature changed the rate of assessment on all homesteads up to \$4,000.00 from 40% to 25% and 20%. During the November election in 1934, the voters of the state passed an amendment wiping out the assessment of all personal property owned by farmers. Therefore, when completed figures for the assessed valuation for use in spreading taxes collectible in 1935 is ready, they will not picture the true taxable wealth of the counties or the state.

It should be stated here that in making this study the assessed valuation for taxes collectible in 1934 was used. This valuation reflects much better the taxable wealth than does the valuation for taxes collectible in 1935, thus making the 1934 valuation a much better factor in determining the financial ability of the community than does the 1935 valuation. The new valuation shifts a part of the burden of taxation from the farmer and home owner to the commercial concerns.

INTERPRETING CERTAIN BASIC PRINCIPLES

In interpreting the following pages on the financial and relief condition of the county, certain facts should be kept in mind. Assessed valuation in almost every case will be reduced from 1926. The cause of this reduction is two-fold:

1. The unsettled economic condition,
2. The inflation of assessed values in peak periods beyond the actual or real value of the property.

It may be added that this inflation is due to certain factors such as anticipated land purchases by the Federal Government, the uncovering of precious metals, and reclamation projects. The rate of fall of the assessed valuation will more or less indicate whether or not the county shows a favorable assessed valuation, that is, if the rate of fall is comparatively normal, the county will fall into the above stated number one category. In the case of a rapid downward trend, the county would fall into number two.

In the consideration of the total tax levy, one must also consider the rate of tax delinquency in the county. As tax delinquency increases, the total tax levy increases proportionately, that is, if the county desired to raise five hundred dollars (\$500.00) and had a 20% tax delinquency, it would have to spread a tax levy of \$625.00. The downward trend in tax levy can be said to be a favorable factor only when the upward trend of tax delinquency is comparatively slow.

If net indebtedness shows a decrease, it is usually favorable to the county; if it shows an increase, it is unfavorable. The percentage of increase or decrease will indicate the extent of the county's condition in that respect.

An increase in both the number of relief cases and total relief expenditures is of course an unfavorable sign, yet may be assumed to be seasonal where the increase is not unreasonable. A comparative picture of relief in each county may be obtained by reference to the table headed "Relief Cost Per Month". The work program of the Civil Works Administration was not on a relief basis, yet it is believed that approximately 50 per cent of those receiving employment in this program would have been on relief had this income not been available. The continued increase in the number of cases and the relief expenditures indicates that the reserves of those not on relief in earlier months are being used up.
